

LIRA HydroLyte™ CALF

DAILY ELECTROLYTE FOR CALVES

A Premium Daily Source of Electrolytes, Essential Minerals and Energy for Calves

An integral part of any routine calf management protocol! Mix with water and provide to calves when electrolyte and essential mineral supplementation is warranted.

**12.5 lb. foil, re-closable, stand-up pouches (4 per case)
50 lb. foil, laminate bags**

Calves:

Thoroughly blend one level scoop (67 cc scoop equals approximately 2 oz or 57 grams) of powder into 2 quarts of fresh, clear water. Allow complete effervescence while mixing, then provide via bottle or pail.

Feed at least 30 minutes before or after normal milk/milk replacer feedings.

Two or three quarts of blended LIRA Hydrolyte Calf may be provided, depending on the size and condition of the calf.

Features:

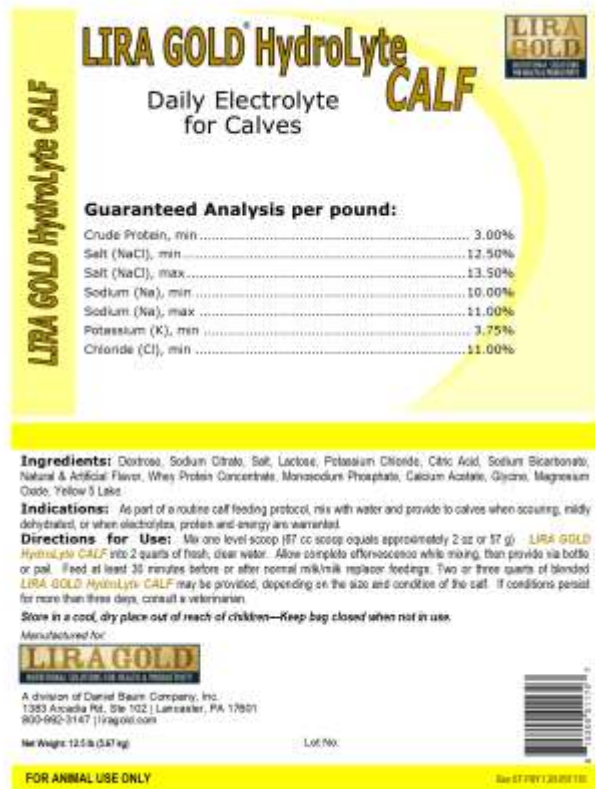

- ◆ **Dextrose and Lactose** – two excellent sources of readily available energy for neonatal and stressed calves.
- ◆ **Protein** – source of essential amino acids.
- ◆ **Glycine** – specific amino acid that enhances electrolyte utilization and intestinal health.
- ◆ **Electrolytes** – excellent concentrated source of Sodium (Na), Potassium (K) and Chloride (Cl).

Benefits:

- ◆ Especially beneficial for enhancing electrolyte balance and fluid retention.
- ◆ Excellent source of energy critical to replenishing electrolytes lost during diarrhea and heat stress.
- ◆ Enhanced efficacy due to natural effervescent mixing properties.
- ◆ Artificial flavors entice calves to drink and help to ensure repeat daily consumption.

LIRA Hydrolyte Calf has been specifically formulated to provide critical electrolytes, essential minerals and energy to calves requiring daily supplementation specifically due to chronic heat stress! Use **LIRA Hydrolyte Calf** as part of any routine calf feeding protocol to encourage water consumption and maintain acceptable levels of hydration.

When calves get sick with even the mildest bout of diarrhea, they lose critical electrolytes and essential minerals necessary for proper fluid retention; thus leading to varying severities of dehydration. **LIRA Hydrolyte Calf** has been developed to provide a unique combination of electrolytes and essential minerals with several forms of energy, protein and amino acids to supplement the critical dietary needs of stressed or mildly dehydrated calves.

LIRA Hydrolyte Calf is a novel formulation of electrolytes and essential minerals for calves. The unique combination of multiple sources of critical minerals, coupled with two forms of energy help to ensure balanced replenishment of electrolytes. The artificial flavors used in **LIRA Hydrolyte Calf** entice calves to drink, and keep them coming back to the water pail!

LIRA Hydrolyte Calf is available in 50 lb. foil, laminate bags (400 doses) and convenient-to-use 12.5 lb. foil, re-closable, stand-up pouches (100 doses). Both packages feature a one-way valve that allows air and humidity to escape and not re-enter; thus, enhancing storage stability and preserving freshness until use.

Special Notes:

Avoid contact with eyes.

Keep bag closed when not in use.
